CRAFTING INNOVATION, REDEFINING STANDARDS

ABOUT US

We are an efficient, innovative, and creative business group, known for its technological leadership, professionalism, and ethical approach, both nationally and internationally. Building on this foundation, The Uroneel Group has defined a clear-cut vision: Build a conglomerate that will become the leader in its chosen business areas, create an organization that all its constituents are proud to be associated with, and set benchmarks that will become the standard for others to emulate; all this without compromising on ethical business practices.

FIRE RETARDANT SERIES

Uroneel FR is composed of fire-resistant minerals (ATH and/or MDH) filled core, sandwiched between two architectural aluminum skins of engineered alloys such as 3XXX/5005 with Kynar 500 (PVDF) lacquered surface finish. Due to the self-extinguishing property of the FR core, it slows down the burning behavior, reduces the intensity of fire, and does not spread or propagate fire.

URONEEL FR ACPs have very low non-toxic smoke emissions, which meet building fire rationale for enhancing fire safety. URONEEL FR panels can be processed and fabricated like any other URONEEL ACPs and are very tough, weatherproof, and, above all, do not actively contribute to combustion in fire breakouts.

FIRE BEHAVIOUR IN A BUILDING

While glass breakage/fallout allows fire to enter/exit, cladding allows/prevents spread

REGULAR ACP

{RAPID FIRE SPREAD}

Fire spreads upwards due to **COMBUSTIBLE CLADDING**

Fire breaks in & out through glass

Flames break out smoke builds up

FR ACP

{RESTRICTED FIRE SPREAD}

Fire spread is restricted due to a **FIRE RETARDANT CLADDING** material and system

No droplets falling down, hence avoiding hazard to people

No smoke & toxic fumes

INITIAL FIRE DEVELOPS AND FLASHES OVER

INTERNAL AND EXTERNAL FIRE INCIDENT
